

MCP Connector — Cheat Sheet

Ask your fleet. Build anything — in plain language, in the AI tools you already use.

Model-agnostic · Read-only · Secure

CONNECT IN 3 STEPS

- 1 Sign in at portal.ensights.ai
- 2 Open **Settings** → **Connectors**, find **enSights**, click **Connect**
- 3 **Approve** the consent screen — you're live

```
Claude Code: claude mcp add --transport http ensights https://mcp.ensights.ai/mcp
```

Works with: Claude · ChatGPT · Cursor · Copilot · any MCP-compatible assistant

WHAT YOU CAN CREATE

- Live dashboards
- Slide decks (QBRs)
- Spreadsheets & models
- Reports (PDF / Word)
- Charts
- Scheduled automations
- Reusable skills

DATA YOU CAN REACH

- Solar generation
- Storage / BESS
- Metering
- Insights & alerts
- Maintenance
- Fleet inventory
- Financial & losses

Across **solar** · **storage** · **EV** assets.

HOW TO ASK

Name three things:

What to create **Which site & when** **How (format)**

e.g. "Build a QBR for Sderot for H1, as a slide deck."

TOP PROMPTS

Portfolio pulse	"How did my fleet do last month vs. expected?"
Spot problems	"Which sites are underperforming? Rank them."
Faults	"Show open high-severity faults by site."
Losses in \$	"Quantify losses at [site] and price them."
Battery	"SoC & round-trip efficiency for [battery] last week."
Maintenance	"What's due this month, by priority?"
Build a deck	"QBR deck for [site], H1."
Export	"Spreadsheet of all sites: capacity & last-month output."
Automate	"Every Monday 7am, send me new faults."

WHY YOU'LL LOVE IT

- **From dashboards to answers.** Ask a question, get the report, chart or dashboard back in seconds.
- **You're the creator.** Build exactly the view you need — no code, no CSV exports, no waiting on analysts.
- **Grounded in your real data.** Answers come from your live generation, storage and financials — not guesses.
- **Priced in dollars.** See losses and value where it matters — the bottom line.

GET BETTER RESULTS

- Name the **site** and the **dates**.
- Ask to **rank** or **filter** ("top 10", "only high-severity").
- Add **"in dollars"** to turn energy into money.
- Say **"turn this into a dashboard / deck / spreadsheet."**
- Then **schedule it** so it runs on its own.

GOOD TO KNOW

- **Read-only** — it reads your data, never changes it.
- **Permission-scoped** — you see only your own assets.
- **Model-agnostic** — use whichever AI you prefer.
